Abstracts

Gas to Liquid Oils is a synthetic solvent with a unique combination of flash point, evaporation rate and boiling range. It is produced by using a carefully controlled process condition and feedstocks which give the resulting Isoparaffin a consistent structure, composition, performance properties and low impurities. It is odorless hence it suitable for use in printing inks, hand cleaners, odorless paints, photocopiers, dry cleaning, household sprays, fragrant polishes and wallpaper manufacture. Gas to Liquid Oils, also known as Isoparaffins, have tremendous technical benefits including their higher flash point (meaning lower flammability) and low viscosity.
