Abstracts

It is common for each specialty pharmaceutical product to have its own go-to-market strategy. Because of the unique specialty drug product specifications, therapy regimens, drug product handling, storage and transportation requirements, pricing, reimbursement and other factors, drug distribution channels and methodologies are impacted and must be considered prior to product launch. Specialty drugs do not necessarily flow directly downstream to the patient via the dispensing pharmacist. Pharmacy benefit-controlled specialty drugs can be more tightly controlled in real time, improving the payers' ability to track utilization.
