Gigabit internet service is also called Gig-speed and ultra-high-speed Internet. The promise of this next-generation high-speed Internet — capable of delivering speeds up to 40 times faster than the typical home connection, based on the FCC benchmark for what constitutes broadband speeds — is allowing users to optimize their home Internet speed and Internet use across all devices. Gigabit Internet service transmits data up to 1 Gigabit per second (Gbps) — or 1,000 megabits per second (Mbps). With that rate of speed, you can download a full HD movie in just a few minutes, update your smartphone's operating system in seconds, and join videoconferences with ultra-high definition video.
