Abstracts

Glass alternative materials are developed from structural polymer composites. Glass alternative materials can also be shaped using techniques derived from wood and polymers. Glass alternative materials have led to an increase in recycling and damage tolerances due to the tough nature of matrix materials. Glass alternative materials have achieved rapid acceptance as suitable alternatives to glass doors, windows, and partitions. High impact strength, high rigidity, and better surface quality coupled with less product rejection, high resistance to extreme temperatures, and creep resistance in constant load and severe environments has led to a higher demand for glass alternative materials compared to glass.
