Abstracts

The main characteristics of glass fiber reinforced polyamide include extremely high rigidity, high mechanical strength, high hardness and toughness, and high creep strength. In addition, they have excellent dimensional stability, good fatigue strength and high mechanical damping properties. All these properties make the material suitable for working conditions that withstand high static loads for a long time under high temperature conditions. Because glass fibers are very susceptible to abrasion on the surface of mating parts in some cases, these glass fiber reinforced polyamides are not suitable for sliding applications.
