An open data management (ODM) platform is an integrated software suite that consists of an open data portal, metadata management, a library of public APIs and data analytics, and visualization and reporting tools. An ODM platform can be developed from open-source software (OSS) and be managed on-premises, or hosted and supported as a service by an open data service provider. The ODM platform supports the collection, discovery, enhancement, analysis and sharing of data, data cataloging, data storage, and data publication in one or more machine-readable formats. The ODM platform serves as the central web portal where government employees, lay citizens, researchers, civic hackers and for-profit companies can search, access, analyze or download and use government data for free.
