Abstracts

3D printing (or additive manufacturing) refers to a process in which a 3D printer is used for stacking layers of material under computer control, following a 3D model (or other electronic data source), resulting in a printed three-dimensional object.

Graphene-enhanced nanocomposite materials greatly improve traditional materials used in 3D printing, like plastics. Graphene nanoplatelets that are added to polymers make materials that are mechanically stronger and with improved thermal and electrical conductivity.
