Abstracts

Felts are soft, flexible, high temperature refractory insulation materials, typically used in vacuum and protected atmosphere environments up to a temperature of 3000°C. Carbon and Graphite Felts are two main types of felt used in industries. They are produced when fibres are pressed, matted and condensed together. The firing temperature of carbon felt is usually about 800°C. After high temperature above 2000 °C in the vacuum or inert atmosphere, the carbon felt turned into graphite fiber felt. The carbon content is much higher than carbon felt, its 99% min.
