Abstracts

A greenhouse (also called a glasshouse, or, if with sufficient heating, a hothouse) is a structure with walls and roof made chiefly of transparent material, such as glass, in which plants requiring regulated climatic conditions are grown. These structures range in size from small sheds to industrial-sized buildings. A miniature greenhouse is known as a cold frame. The interior of a greenhouse exposed to sunlight becomes significantly warmer than the external temperature, protecting its contents in cold weather. Many commercial glass greenhouses or hothouses are high tech production facilities for vegetables, flowers or fruits. The glass greenhouses are filled with equipment including screening installations, heating, cooling, and lighting, and may be controlled by a computer to optimize conditions for plant growth. Different techniques are then used to manage growing conditions, including air temperature, relative humidity and vapour-pressure deficit, in order to provide the optimum environment for cultivation of a specific crop. Greenhouse vegetable crops mainly include cucumbers, eggplant, lettuce, peppers and tomatoes. Lettuce and leafy greens perform best at cooler temperatures, up to 70 degrees Fahrenheit. Tomatoes, cucumbers and peppers, in comparison, grow best at temperatures in excess of 70 degrees Fahrenheit.

This report contains market size and forecasts of Greenhouse Vegetable in global, including the following market information:

Global Greenhouse Vegetable Market Revenue, 2017-2022, 2023-2028, (\$ millions)

Global Greenhouse Vegetable Market Sales, 2017-2022, 2023-2028, (Tons)
