Abstracts

This report focus on grenade launchers market. A grenade launcher is a weapon that fires a specially-designed large-caliber projectile, often with an explosive, smoke or gas warhead.

Grenade launchers are a form of portable firepower available to infantry units, allowing them augment the basic assault rifle. Unlike the RPG, the grenade launcher uses an High-Low propulsion launching system to reduce the recoil and are effective in the 400 meters range. These can be a stand alone system like the M79 or be an multi-launcher, like the MGL, or even the most popular form, the underslung single-grenade launcher. The most used and famous of the assault rifle underslung grenade launchers is the M203 40x46mm. Some armored fighting vehicles also mount fixed arrays of short range, single-shot grenade launchers as a means of defense.
