## Abstracts

ATP (Adenosine Triphosphate), Chinese name is adenosine triphosphate, also known as adenosine triphosphate. It is an energy substance for microbial metabolism, and is commonly found in microbial cells such as bacteria. The ATP instrument enables rapid detection of microbial contamination by using a combination of luciferase and a luminometer to rapidly detect ATP by light emission. It can be used to monitor bacterial contamination of food, pharmaceuticals and healthcare equipment, as well as for hygiene monitoring and wastewater analysis. Handheld ATP instruments are lighter and easier to carry, but have lower performance. Handheld ATP instruments are more suitable for rapid field testing than benchtop ATP instruments.
