Abstracts

Respiratory heaters are external heating devices used in atomizer systems. Respiratory heaters are mainly used to provide patients with heated respiratory gases or heated aerosols. Respiratory heaters, also known as atomizer heaters, are designed to provide patients with warm and heated, mild aerosol therapy. The device is used for patients who need respiratory support through a tracheal tube, nasal catheter or mask. The breathing heater has demonstrated the ability to provide warm ambient air and oxygen to the patient without the need for pipes to deliver medical-grade air. The device can meet the needs of patients who need high-flow treatment.
