The heating equipment industry is comprised of firms primarily engaged in manufacturing heating devices other than electric equipment and warm air furnaces. Residential and low-pressure boilers are included in this classification as are steam and hot water furnaces, fireplaces, room heaters, heating stoves, and other mechanisms. Making fire and building devices to utilize the resultant heat were among the earliest and most noteworthy human achievements. Some stove, furnace, and other equipment designs implemented as early as 600 B.C. were still in use throughout the world in the twentieth century.
