Abstracts

Due to technological innovation and the adoption of smart animal husbandry practices, increased demand for and consumption of livestock products, increased attention to animal husbandry growth and welfare, and emphasis on livestock productivity have driven the demand for the use of growth lights in livestock houses. Grow lights provide a wide spectrum from blue to red, which can be customized to the desired spectrum based on the spectral sensitivity of the livestock. By optimizing different spectrum levels and radiation, farmers can create a lighting environment that is best suited to the welfare of their livestock. For example, in dairy farms, growth lights can help increase cow's milk production; beef cattle use growth lights to stimulate muscle growth to increase meat production.
