HCA, AKA high-content screening systems (HCS), address a range of research applications from basic science to drug discovery screening. The device is usually paired with analysis software. HCA identifies the phenotype or target reaction of small molecules, peptides, RNAi, drug cocktail or, antibody.

Based on high-resolution microscopic images, high content analysis (HCA) enables researchers to detect cellular phenotypic changes at a molecular level, so the technology can be utilized as a powerful tool to study effects of physiologically active substances, such as compounds, siRNA, peptides and antibodies, on cultured cells, tissue samples and whole organisms, like zebrafish.
