Abstracts

A high-density interconnect (HDI) is a fastest growing technology used in the printed circuit board (PCB), which have higher wiring density per unit as compared to the conventional circuit boards. These HDI PCBs have finer lines and spaces (100 m), smaller vias (150 m), and capture pads (400 m). Moreover, HDI PCBs have a relatively higher connection pad density over conventional PCBs that is over 20 pads/cm². Hence, they are widely adopted in the consumer electronics sector and have a high growth potential in the automotive industry.
