Abstracts

Automotive elastomers are characterized by the cross-linked structure formed by chemical binding of polymers. They can be used to manufacture a number of automobile parts such as front-end body panels, belts, hoses, seating, dashboards, airbags, door panels, hoses & seals, brakes & suspensions, instrument & soft touch panels and others. These automotive elastomers exhibit properties superior to that of the traditional rubber drives due to their better heat resistance, flexibility, durability, aging resistance, oil, gas & chemical resistance, and weathering & ozone resistance.
