Fiber laser is refers to the element with rare earth doped glass fiber as gain medium laser, fiber laser can be developed on the basis of the optical fiber amplifier: within the optical fiber under the action of the pump are high power density, causing the laser working substances of laser level 'population inversion', as appropriate to join the positive feedback loop (a cavity) can form a laser oscillation output. The high power infrared fiber laser has an output power range from 1 kW to more than 100 kW and has a wide range of operating wavelengths, single-mode and multi-mode options, high stability and very long pump diode life. It is water-cooled and can be supplied with built-in or independent coolers. And it can provide a variety of optical fiber terminals, collimating optical devices and processing head.
