High purity alumina (HPA) or aluminium oxide with a minimum purity of 99.99% (4N) Al₂O₃, is a high value speciality product with a broad range of uses. Characterised by a minimum purity of 99.99% (4N) Al₂O₃, HPA is the high-end, high-value product of the non-metallurgical alumina market. Due to its superior characteristics such as purity, extreme hardness and corrosion-resistance, HPA is the essential base material for artificial sapphire substrates found in LEDs, also semiconductors, scratchproof artificial sapphire glass, and a growing range of high-performance applications.
