Abstracts

Silane is a colorless and very active compressed gas at normal temperature and pressure. It can spontaneously ignite in the air, and is flammable and explosive. Its chemical molecular formula is SiH_4 . As a gas source carrying silicon components, silane gas requires a large amount of silane as raw materials for the production of photovoltaic solar energy, IC, led and TFT-LCD. Because of its high purity and fine control, silane has become an important gas in the deposition process of the semiconductor industry. At present, silane has become an important special gas that cannot be replaced by other silicon source gases.
