Tetraethylorthosilicate (TEOS) is a liquid source material used in CVD systems for deposition of doped and undoped silicon dioxide films. TEOS is a stable, non-pyrophoric, non-corrosive liquid, and thereby is a preferable alternative to processes employing silane or similar compounds. TEOS is used for undoped SiO₂ films and with liquid dopants to deposit BPTEOS films. Applications for TEOS include undoped and doped interlayer dielectrics, inter-metal dielectrics, pre-metal dielectrics, sidewall spacers and trench-filling applications. It is used as a replacement for silane and other pyrophoric silicon sources.
