High Rate Lithium Battery is an energy conversion and storage device that converts chemical energy into electrical energy through reaction. The surface structure is divided into a positive electrode, a negative electrode, and battery shell. The internal structure is divided into a winding structure and a laminated structure. As electrical appliances require higher performance of lithium ion battery high discharge rate, the production workshops of major manufacturers must strictly control moisture and impurities. Moisture directly affects battery capacity and high-temperature performance, and impurities directly affect battery self-discharge.
