Abstracts

The high-shear mixer also called as rotor mixer, is a high power mixer widely used for effective dissolution of adhesives, coatings or additives. In a high shear mixer, the rotor turns at a high speed within the stationary stator. The high-shear mixer operates wherein the mixing materials are expelled at high velocity creating hydraulic shear which breaks the solid agglomerates. The process industries require high shear mixing to produce solutions, emulsions and dispersions. The industries such as chemical, pharmaceuticals, adhesives, food, plastics etc. places high valued process for gaining efficiency coupled with lean manufacturing techniques. The high competition among various manufacturing companies in the market not only requires machinery for raw materials processing but also to achieve high process efficiency with the current advanced manufacturing techniques. The high shear mixers provide manufacturers achieve quick mix times and same efficiency in every batch of manufacturing. The manufacturers look forward ways to lower their production costs and boosts the production capacity which in turn aids in driving the consumption of high shear mixers.
