Abstracts

High Speed Direct Attach Copper (DAC) Cable is made of twinax copper and assembled with swappable and fixed transceiver modules, such as QSFP, QSFP28, and SFP+. Unlike other cables, the direct attach copper cable is offered in a fixed length (i.e. less than 15m) and used for directly connecting ports between active equipment servers, storage, switches, and routers. The speed of data rate can vary from 10G to 100G, and 100G of data rate can only transmit up to 5m using direct attach copper cable. Owing to a shorter length, the direct attach copper cable is used for connecting equipment located with close proximity and are considered extremely reliable, and thus are widely used for data center application.
