Abstracts

High temperature heat pump, also known as industrial heat pump, is defined as a heat pump that can transfer heat. It can solve the heating problem of many ordinary heat pumps limited to 70°C to 80°C, with high heating temperature. In terms of energy efficiency, utilization of excess heat, and reduction of climate gas emissions associated with process heat generation, high temperature heat pumps' ability to transfer process heat can be used in all processes, from hot water production to upgrading waste energy for use in other processes. The aim is to produce hot water for use in health services, heating the environment or, more generally, industrial processes.
