Heat-resistant ABS plastic is one of the five major synthetic plastics. The Chinese name of ABS is polymer. It was first discovered in the outbreak of World War II. It has good impact resistance, heat resistance, low temperature resistance and chemical resistance. It also has the characteristics of easy processing, stable product size, good surface gloss, easy painting and coloring, and can also be used for secondary processing such as surface metal spraying, electroplating, welding, hot pressing and bonding. It is used in industrial fields such as machinery, automobiles, electronic appliances, instrumentation, textiles and construction. It is a thermoplastic engineering plastic with a wide range of uses.
