Abstracts

The heat source of industrial high-temperature environment is mainly the combustion of various fuels (such as coal, oil, natural gas, gas, etc.), and the mechanical rotation friction (such as electric motors, machine tools, grinding wheels, electric saws, etc.), so that the mechanical energy becomes heat energy and part of Chemical reaction. High temperature generally speaking, the material is heat-resistant above 250 °C. At this time, if the material cannot be well used and protected, the harm caused by heat energy will be inestimable. High Temperature Resistant Coatings are High Temperature Resistant Coatings used in various machines and equipment of Power plant.
