Abstracts

Silicone cables are characterized by their high temperature resistance up to +250°C combined with permanent flexibility. Due to the cross-linked molecular structure, silicone cables remain in their original shape even when exposed to temperature. Silicone cables are halogen-free on silicium basis with which the maintenance of function in case of fire can be reached. Heat-resistant silicone cables are used, for example, in metallurgical plants steel mills and rolling mills, for the internal wiring of lights or in glass and ceramics processing.
