So its relative molecular weight is small, water solubility is good, and the melting and boiling points are low. The content of unsaturated fatty acids in MCT is very low, its iodine value is not more than 0.5, compared with other vegetable oil and animal oil, MCT oxidation stability is very good. In addition, MCT and a variety of compounds have a good mutual solubility, can be used as vitamins, essence, pigment and other products solvent.

MCT in the body of the digestion and absorption is absorbed is without bile salts can be complete on small intestinal mucosa cells hairs or enter cells, absorb faster than general long chain fatty acid triglycerides, resulting in chain fatty acids in the intestinal cells don't have to esterification synthesis of triglycerides, and directly in the form of fatty acids by portal vein to the liver, without shuttle, efficient quickly in liver were decomposed to produce energy.
