Most tap and well water contain moderate to heavy levels of contamination from industrial and environmental pollution. All sources of water whether it be a lake, river, glacier or well, contain some level of contamination. Contaminants range from naturally occurring minerals to man-made chemicals and by products. A Home Water Filtration Unit can solve a wide range of problems affecting the water quality, taste, or appearance of the water. Whole house filtration systems remove contaminants from water through a filter connected to water line. All of the water coming into house will pass through the filter before being routed to faucets, toilets and appliances in the house.
