Abstracts

Honeycomb activated carbon is made of high-quality coal activated carbon as raw material, pressed by a honeycomb mold and activated at high temperature. It has the characteristics of relatively large area, small through hole resistance, developed micropores, high adsorption capacity and long service life, and is widely used in air pollution control. Select honeycomb activated carbon adsorption, that is, the exhaust gas contacts with the porous activated carbon with a large surface, and the pollutants in the exhaust gas are adsorbed and decomposed, thereby playing a purification role.
