Abstracts

Hotel revenue management systems (RMS), also known as yield management systems, use data analytics to help hoteliers maximize revenue and profitability. These solutions draw upon historical data and market data, as well as demand signals, to identify the best room rate for each respective channel listing and maintain real-time rate optimization. This automates an extremely time-consuming manual process and allows hoteliers to focus on other operational tasks. A hotel RMS helps hoteliers make intelligent pricing decisions and visualize complex data in a digestible format, improving revenue per available room (RevPAR) and budget forecasting. Some products also allow pricing to be compared against competitors for further insights. Strong reporting features enable data to be exported and shared with ease.
