Abstracts

Hydraulic seals are widely adopted in industries because they have a significant advantage in providing leakage protection control. Adverse industrial conditions in process industries are increasing the harsh conditions faced by equipment and this has also contributed to an early wear out of material medium of equipment. Oilfield media and different environments in end-user industries limit the seal life and the performance of equipment. To assist industries in coping with the increasing harshness and also capture a fair amount of market share, vendors are designing seals with high-quality materials for them to be able to handle heavy-duty operations.
