Adhesion and covering force of hydrofluoric acid resistant ink is far better than that of dry film. Its excellent coating ability can be fully reflected through various coating methods. Clear definition, high precision and minimal cut, making it ideal for single-sided, double-sided, high-precision multilayer and flexible PCB boards. It is a kind of acid-proof ink, also suitable for stainless steel, iron and aluminum materials plate. The special feature is that it can be tinned without post-curing. It has good adhesion and covering power to copper clad plate. Smooth ink coating without separation, blistering voids or pinholes. Excellent corrosion resistance to ensure clear circuit without burr. Ultra-high precision makes the minimum conductor width/gap up to 2/2mil (0.05/0.05mm). At the same time, it has significant mechanical properties, such as hardness, adhesion, wear resistance, etc. Wide operating tolerance limit reduces the percentage of rework and scrap. High sensitivity reduces the degree of undercutting. Easy removal of ink, thus reducing contamination. Low irritation to skin and eyes. Acid resistance: PH value 1-9, etch time less than 5 minutes at 45±5°. It is excellent in adhesion and excellent resolution of patterns. The photoresist ink is used for etching work, this ink is anti-acid & alkaline.
