Hydroxypinacolone retinoate (HPR), a cosmetic grade ester of ATRA, is unique in that it processes innate retinoic acid activity, and thus does not need to undergo metabolic breakdown to achieve skin benefits. It has been demonstrated to be more stable and cause less skin irritation than ATRA. Additionally, these compounds were tested for their anti-aging properties, as measured by natural collagen levels on skin. The results suggest that HPR is an effective cosmetic alternative to ATRA and other less effective retinoids in improving the appearance of aging skin without the irritation. The big promise of HPR is that it's similarly active as retinoic acid (no conversion needed, remember) but without the irritation. According to the manufacturer's tests, 24 hours of an occlusive patch with 0.5% HPR resulted in significantly lower irritation than 0.5% retinol.
