“Interdigitated back contact’ solar cells, known as IBC solar cells, offer more efficiency, energy yield and reliability than other solar panel technologies. The technology is more complicated than other solar cells, but the added value per cell makes it desirable. Instead of front contact energy conversion, IBC has back contact energy conversion. This allows for the entire front of the cell to absorb sunlight, without any shading from the metal ribbons, like those on PERC cells, converting more photons to energy.
