## Abstracts

A flake ice machine is an ice-making machine that produces small chips or flakes of hardened ice. Flakes of ice can be useful for activities like setting up presentations of frozen and chilled food where people will see the ice and it needs to look neat and aesthetically pleasing. Flake ice is used to treat injuries and it is also used to transport medical supplies and delicate tissues and organs. Ice flakes are used in laboratories, emergency rooms, physical therapy centers, and rehabilitation centers. With the use of international quality standard material and advanced manufacturing and designing technology, units prove to be highly reliable and durable flake ice makers available on the market. These systems are delivered all over India and exported to Asian, African, and Middle East countries with economical prices and excellent warranties. Flacking machines are used in the preservation of organs and help in providing temporary refrigeration for laboratory work. Also, a crucial aspect of ice flaking machines is that it also helps to cool patients. These are the main advantages that support the growth of the ice flakes machine market. The use of ice flakes increases during physical therapy as it has been seen that the total count of surgeries increases due to a rise in road accidents, which is expected to drive the growth of the ice flakes machine market. Increasing in chronic disease & infection, which demands refrigeration for laboratory work, which also contributes to boosting the growth of the ice flakes machine market. Similarly, in the forecast period (2021 to 2027), the rise in R&D innovations carried out by ice flaking machine producers and an increase in diagnostic and clinical laboratories, which use ice flakes for storing the blood samples are likely to create new opportunities for the ice flaking machine market.
