## Abstracts

Illite is a secondary mineral precipitate, and an example of a phyllosilicate, or layered alumino-silicate. Illite occurs as an altered product of muscovite and feldspar in weathering and hydrothermal environments. Structurally, illite is quite similar to muscovite with slightly more silicon, magnesium, iron, and water and slightly less tetrahedral aluminium and interlayer potassium.

This report contains market size and forecasts of Illite in Vietnam, including the following market information:
