Abstracts

Implantable Cardiovascular Devices, Including Pacemakers, Implantable Cardioverter-defibrillators, Ventricular Assist Devices and Cardiac Loop Recorders, Are Designed to Help Manage a Person's Heart Rate or Rhythm Problems and to Control or Monitor Irregular Heartbeats in People with Certain Arrhythmias and Heart Failure, for Patients with Bradycardia, Ventricular Arrhythmias or Supraventricular Arrhythmias. It is Used in Patients with Bradycardia, Ventricular Arrhythmias or Supraventricular Arrhythmias. Implantable Cardiovascular Devices Can Help Support Cardiac Patients by Using Painless Electrical Signals to Keep the Heart Beating Regularly and Improve Function when the Device is Placed Through a Minimally Invasive Procedure. In Addition to Delivering Electrical Pulses, the Implantable Device is Now Able to Send Clinical Data Directly to the Physician Using Remote Monitoring. It Will Continuously Collect Information About the Heart Rhythm, Which is Transmitted Wirelessly to Medical Personnel when Symptoms Occur, Thus Facilitating Remote Monitoring, Which Doctors Can Use to Manage the Condition and Potentially Detect Signs of Deterioration Earlier. Not Only Do These Devices Improve Heart Disease Symptoms, but They Have Been Shown to Improve Long-term Survival Rates. These Devices Continue to Get Smaller, More Efficient, and Have Longer Battery Life. These Devices Are Usually Inserted Under Local Anesthesia and They Are Located Just Below the Collarbone to Avoid Being Visible from the Outside of the Body. Most Devices Require Periodic Monitoring, Usually Once a Year, on an Outpatient Basis.
