Abstracts

An implantable cardioverter defibrillator is a device that monitors a person's heart rate post its implantation in patients with heart failure. The device continuously monitors your heartbeat and sends electrical pulses to repair a normal heart rhythm when necessary. Implantable cardioverter defibrillator (ICD) or automated implantable cardioverter defibrillators can save patients from arrhythmias by regulating the irregular heartbeats. The device is used in treating sudden cardiac arrest caused due to cardiac arrhythmias, particularly ventricular fibrillation and pulseless ventricular tachycardia.
