Abstracts

Indirect Water Heater is a kind of water heater, which generates more hot water than standard hot water heaters. An indirect water heater is one of the most cost effective ways to heat water because it eliminates the tremendous flue loss associated with gas-fired storage water heaters but without the hassles and extra costs of tankless gas water heaters. When used with a modern, high efficiency boiler, these energy savings hold true even in the summer when your boiler isn't needed for heat.
