## Abstracts

Industry cloud is a cloud system that has been heavily customized to fit a specific industry in order to accommodate the business, operator, legal, regulatory, as well as security and other considerations. The main focus of industry cloud is vertical integration and vertical solutions rather than horizontal ones, which is the focus of general cloud computing. This means that industry cloud solutions focus on creating more value within the bounds of the industry in which it is used rather than expanding the breadth of that industry.
