Abstracts

The industrial cross field microwave magnetron emission source adopts the continuous wave magnetron as the microwave oscillation source. The magnetron is a kind of orthogonal field microwave electron tube, which is an electric vacuum device used to generate microwave energy. In the diode in the magnetic field, the electrons in the tube interact with the high-frequency electromagnetic field under the control of the mutually perpendicular constant magnetic field and the constant electric field, and convert the energy obtained from the constant electric field into microwave energy, so as to achieve the purpose of generating microwave energy.
