## Abstracts

An emergency shutdown system (ESD) is a safety-instrumented system that protects a manufacturing plant from explosions or leakages. Industrial emergency shutdown systems are used in the petrochemical and chemical, gas and oil, and other industries as a safety instrument system to protect the manufacturing plant from leakage or explosion. These systems are connected to sensors with PLCs to form a safety loop. The industrial emergency shutdown systems are used to shut down or halt a plant when hazardous situations like uncontrolled flooding, hydrocarbon escape etc. take place.
