Polydicyclopentadiene (PDCPD) is a thermoset polymer material designed for high resistance against chemicals, heat, and corrosion. It possesses high impact strength and has a rigid, tough structure. Polydicyclopentadiene is exploited in applications where mechanical properties and product service environments are crucial.

Polydicyclopentadiene is developed by polymerizing low viscosity dicyclopentadiene monomer through a process known as ring opening metathesis polymerization in the presence of a catalyst.
