Pipeline Strainers (STR) are closed vessels that collect solid particles to be separated while passing a fluid through a removable screen. The screens can collect particles down to 0.001 inch in diameter. They can remove more than unwanted material. Pipeline strainers provide protection for large turbine and positive displacement metering systems against dirt and foreign materials.

Industrial Pipeline strainers are used by industrial and commercial customers to protect their process equipment by removing debris from the liquid that flows through pipelines.
