## Abstracts

Cold spray has been applied to numerous high strength aluminum parts, but it has also been used to deposit stainless steel and other high strength steels, bronze alloys, nickel alloys, titanium, and even exotic elements like tantalum and niobium. Cold spray doesn't fix everything, but it has the ability to solve challenges that other technologies simply can't touch. And just as importantly, once a cold spray process has been developed, it can be applied reliably and repeatedly for a given application.
