Abstracts

The term 'USB camera' implies that an industrial camera is connected to a computer via a USB interface. It transfers the parameters, which are used to set the camera, as well as the image data. Actually, this statement is trivial. We emphasize it, since a lot of people read too much into it. One of the common misconceptions is the association of 'USB camera' with 'low image quality'. But actually, the image quality is determined by the CCD sensor or CMOS sensor. The USB interface simply transfers the images taken by these sensors.
