## Abstracts

Infant Warmer designed to provide a temperature controlled environment that help newborn infants to maintain their body temperatures, often those infants who were born prematurely or with an illness. It has a heat source positioned above the baby to keep his or her temperature constant. In detail, the infant radiant warmer is a mobile, battery powered device that addresses severe heat loss suffered by some infants by allowing the infant's bed to be uniformly heated. This is done by infrared radiation (IR) from a quartz heater that is beamed by a parabolic reflector uniformly over an infant's bed. The device has a sensitive thermostat that does not require calibration to use it. The control panel can sense the infant's temperature quickly through the use of a highly sensitive thermistor probe.

This report contains market size and forecasts of Infant Warmers for Critical Care in global, including the following market information:

Global Infant Warmers for Critical Care Market Revenue, 2017-2022, 2023-2028, (\$ millions)
