Abstracts

Wound care management is an all-encompassing term that includes the complete spectrum of holistic clinical measures, methods, and interventions in the care of patients with wounds. Wound Care Management products are designed to treat more complex wounds and—in order to be covered under insurance—usually require a doctor's order. This includes hydrogels, hydrocolloids, alginates, and film and foam dressings. Wound Care Management treatments revolve around the principle of moisture therapy, which provides moisture to the wound site to encourage natural cell repair while giving the wound room to breathe. Products utilized in moist wound care generally fit better around different wound shapes and sizes and are more resistant to environmental inhibitors and foreign particles.
